Daak

Run-sheet: one shop, two drivers, one receiver

From nothing to a delivered, paid parcel in about ten minutes

The cast

Shop sending	**Gupta Garments**	Kanpur, Jhakarkati bus stand	books and pays
Driver 1	**Ramesh**	Kanpur to Lucknow, 87 km	first stretch
Driver 2	**Suresh**	Lucknow to Gorakhpur, 272 km	second stretch
Shop receiving	**Ghosh Cloth House**	Gorakhpur bus stand	takes delivery

Before anyone arrives

- ☐ Phones: the latest app on each (two phones at least, for "both phones signed"; one phone works with Me, Switch badge). NFC, GPS and data on, app in English (Me, Language), charged.
- ☐ One blank NFC sticker (NTAG213 or 215) per parcel, a box with a flat lid, and a marker.
- ☐ Laptop tabs: the landing page (the film), /live, /ops signed in (paste the passcode with no space at the end; 5 wrong tries lock it for 15 minutes), HashScan topic 0.0.11327109, /pitch, these briefs.
- ☐ 0G: check whether the sealed provider is up (the /ops parcel page or the provider list). If it is down, say so: the handoff is recorded and the pay waits, which is the design.
- ☐ Shop balance: /ops, Shop balances. Keep at least Rs 700 (a 24 kg parcel on 359 km costs Rs 599.26). Top up by UPI and enter the UTR, or use an existing balance.
- ☐ STAND_RADIUS_M=0 is set in Vercel (the stands are in UP, the demo is in Mumbai). HOLDBACK_HOURS=0.25: held pay releases 15 minutes after delivery.

Join the four (about two minutes each)

Shop	Continue with Google, Join, "Shop sending parcels", shop name, mobile, stand Kanpur.
Ramesh	A second Google account: Driver, name, mobile, UPI ID, bus plate, UPSRTC, driving licence with its last 4 and a photo, stretch Kanpur to Lucknow and the bus time.
Suresh	Same, stretch Lucknow to Gorakhpur.
Receiver	Join as "Shop receiving parcels", stand Gorakhpur.
Operator	/ops, Driver ID checks: "Ask 0G to read it" for each driver, then Verify (by eye if 0G is down). Optional: Ramesh vouches for Suresh by scanning his code from the Me tab.

The run

#	Step	Do	Show
1	Book	Shop: tap the blank sticker, pick Ghosh Cloth House, the drivers come per stretch. Enter 4 kg and 60 x 50 x 40 cm: it is charged as 24 kg, x2.9. Book and pay. Tap the sticker again to write its tracking link. Write the code on the lid, big.	HashScan: the x402 settlement and the booking on the topic; /live: the new parcel.
2	Accept	Ramesh and Suresh: Jobs, New jobs, Accept. The card shows the stretch, the pay and the charged weight.	The answer goes on the log.
3	Kanpur	Ramesh: Hand over, tap the sticker, scan the shop's code (Receiving? Show my code) or tap a badge, photograph the lid with the code readable.	The verdict in Hindi and English; /live: stop 1.
4	Check	0G reads the lid in its sealed machine. If it is down: "waiting for the check"; later, /ops, Recheck with 0G.	The 0G request id on the stop; the decision on 0G Storage.
5	Lucknow	Ramesh hands to Suresh: tap the sticker, scan Suresh's code (both phones sign), a new lid photo.	Ramesh's advance on HashScan the moment Suresh confirms.
6	Gorakhpur	Suresh hands to the receiver the same way, with a new photo.	Suresh's advance; the held pay as one schedule on HashScan, releasing in 15 minutes.
7	Track	Receiver: tap the parcel with any phone.	The tracking page in Hindi and English, with the road and each stop.

Easy to miss

- A new lid photo at every stop: the server refuses a photo it has already seen.
- The code must be readable in the photo, or 0G holds the pay (that is a correct refusal, and worth showing once).
- One sticker per parcel: the sticker's serial is the parcel.
- If a handoff says "offline", it is queued on the phone and sent when there is signal; do not redo it.
- Bookings are capped at 12 an hour.
- If anything stalls, open KNP-1204 on /live: the full day, held, rechecked by 0G and paid by its own schedule.
- After the mentors, before the judges' run: set DATA_SINCE in Vercel to that run's start, so test bookings drop out of the lists.
